

Climate Change Policy

September 2025

At FARMHISPANIA Group, our purpose is to protect and promote people's health. This mission guides our activities, our actions and decisions, extending beyond the development of active pharmaceutical ingredients.

Protecting health also means caring for the planet. That is why FARMHISPANIA Group has committed to taking decisive action against climate change as part of our corporate responsibility.

This policy reflects our strong commitment to bold climate action, aligning our environmental objectives with the company's strategic planning. Our strategy is ambitious and grounded in the principles of the Task Force on Climate-related Financial Disclosures (TCFD) of the Financial Stability Board (FSB), which we have adopted as a framework for our mitigation initiatives.

We also support the Science Based Targets initiative (SBTi), setting climate goals aligned with international efforts to limit global warming to 1.5°C, in accordance with the Paris Agreement. Transparently communicating our progress through CDP reinforces our accountability and our commitment to continuous improvement.

This policy empowers us to face climate challenges decisively, ensure the sustainability of our operations, and generate a long-term positive impact.

We invite all our stakeholders to join this common cause to reduce greenhouse gas emissions and move towards a healthier and more resilient future for all.

Together, let us build a climate-responsible and resilient value chain, leaving a healthy legacy for future generations.

Sergi Ruiz
CEO FARMHISPANIA Group

Climate Change Policy

September 2025

1. Global Context

Climate change is one of the greatest challenges to global economic, social, and environmental stability. In response, governments, businesses, and citizens must take an active and coordinated role. The Paris Agreement reflects this global consensus by establishing a common framework to limit the rise in global temperature to 1.5°C, aiming to prevent irreversible impacts on the planet.

The effects of climate change are evident in **physical risks** (such as extreme weather events, threats to food security, and public health) and in **transition risks** (related to new regulations, technological advancements, and shifts in market dynamics). If the intensity and pace of global warming are not curbed, these risks will intensify, leading to scenarios of greater uncertainty and impact.

In this context, **opportunities** also arise linked to innovation, collaboration, and the development of sustainable initiatives.

Proactively assessing these risks and opportunities is essential for making strategic decisions and creating long-term value.

The European Union has set climate neutrality by 2050 as a cornerstone of its political and economic agenda. This commitment paves the way toward a low-carbon, resilient, and fair economy, to which all organizations must contribute.

September 2025

2. Climate Position of FARMHISPANIA Group

At FARMHISPANIA Group, we recognize climate change as a material and strategic issue, essential to the sustainability of our business and the environment in which we operate. That is why we support the goals of the Paris Agreement and have integrated the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) into our management model.

Our vision of a low-carbon future has led us to develop an ambitious climate plan, which includes publicly stated greenhouse gas (GHG) reduction targets, using 2022 as the baseline year.

These progressive targets are aligned with the pathway to limit global warming to 1.5°C and with the goal of achieving climate neutrality by 2050.

This commitment is formalized through our adherence to the Science Based Targets initiative (SBTi), ensuring that our actions are science-based and aligned with global mitigation efforts. Furthermore, we maintain an active transparency policy, reporting our progress both in the annual Sustainability Report and through the CDP platform.

3. Objectives and Climate Action of FARMHISPANIA Group

FARMHISPANIA Group has established a robust and ambitious roadmap to reduce its greenhouse gas (GHG) emissions, aligned with the 1.5°C scenario required by the Paris Agreement and defined by the Science Based Targets initiative (SBTi). This strategy includes concrete measures aimed at decarbonizing its operations and value chain, as well as integrating sustainability and circular economy principles as strategic pillars.

Climate Change Policy

September 2025

For the 2023–2030 period, FARMHISPANIA Group is committed to an absolute reduction of Scope 1 and 2 emissions by 42% compared to the 2022 baseline, and a 25% reduction in Scope 3 emissions from fuel -and energy- related activities over the same period. Additionally, FARMHISPANIA Group aims for 71% of its suppliers (by spend) and customers (by revenue) to set their own validated SBTi reduction targets by 2029.

Key measures to achieve these objectives include:

- Closure of natural gas cogeneration plants at FARMHISPANIA Group sites, which account for 88% of Scope 1 and 2 emissions.
- Use of 100% renewable electricity, through both self-consumption and guarantees of origin, covering 9% of Scope 1 and 2 emissions.
- Indirect reduction of Scope 3 emissions associated with fuel use, resulting from decreased stationary combustion energy consumption.
- Implementation of the Supplier Engagement Program to promote value chain decarbonization, which includes:
 - ✓ Identification and classification of key suppliers and customers based on their climate maturity.
 - ✓ Support in calculating their carbon footprint and designing reduction plans.
 - ✓ Information exchange to refine emission estimates related to purchased goods and processing of sold products.
 - ✓ Assistance in developing climate targets aligned with SBTi framework.

Climate Change Policy

September 2025

In addition, FARMHISPANIA Group has implemented multiple measures to reduce CO₂ eq emissions, including the use of renewable energy sources, energy efficiency improvements, promotion of sustainable behaviors, and the integration circularity into production processes and resource consumption. These actions align with the commitments made since 2024 through the Science Based Targets initiative SBTi and support the long-term goal of achieving climate neutrality.

FARMHISPANIA Group reaffirms its commitment to the Sustainable Development Goals, particularly **SDG 12** (Responsible Consumption and Production) and **SDG 13** (Climate Action), thereby consolidating its role as a catalyst in the transition toward an economically, socially, and environmentally sustainable development model.

4. Dissemination and Communication

This Climate Change Policy is available on the corporate website www.farmhispaniagroup.com and it is accessible to all FARMHISPANIA Group personnel.

This policy is complemented by the Sustainability Policy and other internal policies that together form the regulatory framework of FARMHISPANIA Group, ensuring a consistent and integrated approach aligned with our environmental, social, and governance (ESG) commitments.

In addition, we actively promote climate awareness in line with our corporate values and overarching sustainability policies.
